

EXP6 Expanding foam tape is a pre compressed open celled tape which renders high resistance to wind and weather as well as UV-light, and simultaneously reduces the risk of rot and fungal attacks on adjacent building materials.

EXP6 Expanding foam tape is a high quality product, which to a vast extent benefits the environment, both in production and application.

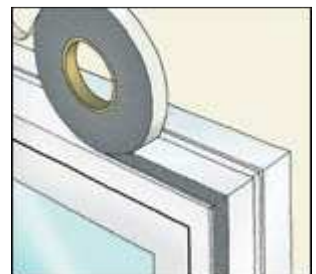

- Sealing of gaps between window/door frame embrasure
- Sealing between concrete sections
- Sealing between sill and embrasure
- Sealing of double casement windows
- Sealing of sky-lights and roof-lights
- Sealing of roof constructions
- Insulation against noise and vibrations in connection with ventilation and climate installations
- Insulation against noise and vibrations within the mobile industry

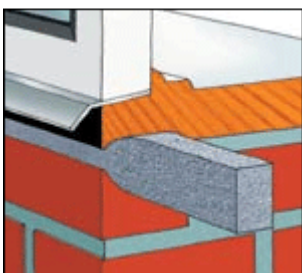

EXP6 Expanding Foam Tape renders a wind and water resistant sealing and in normal circumstances requires neither preparation nor finishing of the joint.

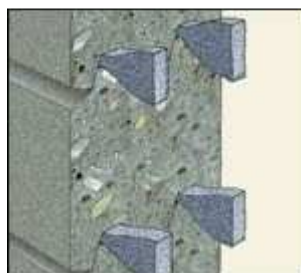

EXP6 Expanding Foam Tape retains its flexibility and adapts to unevenness and joint movement in the construction.

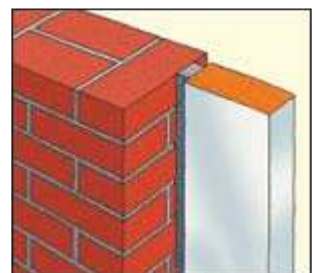

EXP6 Expanding Foam Tape can advantageously be mounted immediately prior to window installation.

EXP6 Expanding Foam Tape is available in colours matching most common building materials.

EXP6 Expanding Foam Tape is resistant to alkali extracts and residues from concrete and compatible with most known building materials.

EXP6 Expanding Foam Tape does not contain plasticizers which could affect e.g. coated surfaces.

Due to its very fine qualities, **EXP6** sealing tape has a very wide application range within modern buildings, where today's demands on reliable sealing solutions have significantly increased over the past few years. Lynvale's construction products have been designed to meet and exceed these demands.
